UI KIT EVALUATION REPORT – Issues & Recommendations

1. Dashboard

Issues:

- UI Kit download button is not easily discoverable.

- Outdated navigation links referencing older versions.

- Missing direct integration path for new developers.

Recommendations:

- Add a prominent "Download UI Kit" CTA.

- Add Quick Start integration guides.

- Highlight required App Keys for UI Kit onboarding.

2. UI Kit Builder

Issues:

- Theme requires but documentation does not mention it.

- Missing module summary before download.

- Some previews inaccurate.

Recommendations:

- Add step-by-step guided builder flow.

- Add pre-download summary.

- Improve real-time theme preview.

3. Documentation

Issues:

- Mixed versions (v2/v3/v4).

- Missing troubleshooting steps.

- Outdated screenshots and broken links.

Recommendations:

- Add full starter project.

- Add error-handling and common warnings section.

- Version-tag all documentation pages.

4. Actual Implementation (Code)

Issues:

- Missing React key props.

- Theme root warning.

- Uncaught promise errors without catch handlers.

Recommendations:

- Add internal key props.

- Provide auto theme-injection snippet.

- Improve async error logging.

Conclusion:

The UI Kit experience works functionally but suffers from outdated documentation, theme issues, and onboarding friction. Improving builder guidance, documentation accuracy, and internal rendering logic will significantly improve developer adoption.
